10 FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4 FERRICYTOCHROME C.
PATHARY: TERMINAL SYEP IN THE RESPIRATORY CHAIN.
SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL
INNER MEMBRANE. CONFAINS 12 POTENTIAL TRANSMEMBRANE DOMAINS.
SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.

CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME A3 AND COPPER B.
                                                                                 4 FERRICYTOCHROME C.
-1- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. CONTAINS 12
POTENTIAL TRANSMEMBRANE DOMAIN:
-1- DEVELOPMENTAL STAGE: FREE IN SOIL (NOT AS BACTEROID).
-1- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.

CHILDEAU LAR LOCATION: ASSOCIATED WITH MICROTUBULES IN UNSTIMULATED CELLS BUT IS TRANSLOCATED TO THE MEMBRANE RUFFLES IN CELLS
CELLS BUT IS TRANSLOCATED TO THE MEMBRANE RUFFLES IN CELLS
STIMULATED ITH EGF (EPIDERMAL GROWTH FACTOR).

CHEART AND AT LOWER LEVELS IN SKELETAL MUSCLE AND KIDNEY. IN EMBRYO, HIGHLY EXPRESSED IN LUNG EPITHELIAL CELLS, PRIMARILY IN THE DISTAL AIRWAYS.

CHOPELOPMENTAL STAGE: AT E8 5 EXPRESSED IN THE PRIMITYE STREAK, AND ESTALL FOREBRAIN, CELLS LATERAL TO THE POSTRAL FOREBRAIN, CELLS LATERAL TO THE POSTRAL POREBRAIN AND DEVELOPING MIDBRAIN. AT E9.5 CONTINUES TO BE EXPRESSED IN THE BRANCHIAL ARCHES AND PRIMITIVE STREAK, AND IS ALSO DETECTED IN THE BRANCHIAL ARCHES AND THE FOREIRM BUD. AT E10.5 EXPRESSED IN THE SOMITES, FRONTONASAL PROCESSES, TAILBUD, AND AND HINDLING BUD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. Coffman H.R., Kropf D.L.;

The brown alga, Pelvetia fastigiata, expresses two alpha-tubulin sequences.";

(In) Plant Gene Register PGR97-019.

-I-FUNCTION: TUBULIN IS THE MAJOR CONSTITUENT OF MICROTUBULES. IT BINDS TWO MOLES OF GTP, ONE AT AN EXCHANGEABLE SITE ON THE BETA CHAIN AND ONE AT A MONEXCHANGEABLE SITE ON THE BETA CHAIN AND ONE AT A MONEXCHANGEABLE SITE ON THE ALPHA-CHAIN.

-I-SUBUNIT: DIMER OF ALPHA AND BETA CHAINS.

-I-SIMILARITY: BELONGS TO THE TUBULIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            229 IGCIGITIACIGIGIAGCGCIIGAIGACIICCIIGCIGIACICCGCIIGG 278

-! FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDOCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                            4 FERRICYTOCHROME C.
-!- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROFEIN. MITOCHONDRIAL
-! INNER MEMBRANE. CONTAINS 12 POTEWIAL TRANSMEMBRANE DOMAINS.
-!- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                                                                                                      "Oomycete mtDNA: Phytophthora genes for cytochrome c oxidase use an unmodified genetic code and encode proteins most similar to plants.";

I. FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER FORMED BY HEME AS AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -1- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-1- SUBGELLULAR LOCATION: INTEGRAL MEMBRANE ROTEIN. MITOCHONDRIAL.
INNER MEMBRANE. CONTAINS 12 POTENTIAL TRANSMEMBRANE DOMAINS.
-1- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CATALYTIC ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 2 H(2)O

"Mitochondrial gene order is not conserved in arthropods: prostriate
and metastriate tick mitochondrial genomes.";

Mol. Biol. Evol. 15:1772-1785(1998).

-! FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY
CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-
3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE
CATALYTIC SUBUNIT OF THE ENYME. ELECTRONS ORIGINATING IN
CYTOCHROME C ARE TRANSFERRED VIA THE COMPER A CENTER OF SUBUNIT 2
AND HEME A OF SUBUNIT I TO THE BIMETALLIC CENTER FORMED BY HEME A3
AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                  -:- CATALYTICA ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 2 H(2)O + 4 FERRICYTOCHROME C.
-:- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-:- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL INNER MEMBRANE. CONTAINS 12 POTENTIAL TRANSMEMBRANE DOMAINS.
-:- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                             Mitochondrion.

**Perkins K.W., Admon A., Patel N., Tjian R.;

**Genes Dev. 4:822-834(1990).**

**EUNCTION: DEVELOPMENTALLY REGULATED TRANSCRIPTION FACTOR AP-1

**PINS AND RECOGNIZES THE ENHANCER DAS SEQUENCE: TGA(CG)TCA. MAY

**PLAY A ROLE IN THE FUNCTION OR DETERMINATION OF A PARTICULAR

**SUBSET OF CELLS IN THE DEVELOPING EMBRYO. IT IS ABLE TO CARRY OUT

**ITS FUNCTION ENTHRE NIDEREDENTIALY OF OR IN CONDUNCTION WITH DJRA.**

**C. I- SUBUNIT: MAY FORM INMER OF IDENTICAL CHAINS AND MAY ALSO INTERACTS

**MITH DJRA TO FORM AN HETERODIMER. DFRA-DJRA COMPLEX IS BOUND MORE

**STABLY TO THE AP-1 SITE THAN EITHER OF THE TWO PROTEINS ALONE.**

**C. I- SUBCELLULAR LOCATION: NUCLEAR.**

**ITS USE SPECIFICITY: CELLS TYPE OF THE EMBRYO THAT ARE INVOLVED IN

**THE DRYBLOPMENT OF THE HEAD AND NERVOUS SYSTEM.**

**C. I- SIMILARIYY: BELONGS TO THE BAILY FOS SUBFAMILY.**

Proc. Sugar Beet Res. 29:15-21(1987).
-!- FUNCTION: CYTOCHROME C OXIDAGE IS THE COMPONENT OF THE RESPIRATORY
CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-
3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE
CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN
CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2
AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS
AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                        4 FERRICYTOCHROME C.
-1- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL
INNER MEMBRANE. CONTAINS 12 POTENTIAL TRANSMEMBRANE DOMAINS.
-1- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                              STRAIN=CV. TK81-0;

Genet. 20:331-337(1991).

-1- FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER FORMED BY HEME AS AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mitochondrion.

-1- FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNTS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYZIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HERE A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4 FERRICYTCCHROME C.
-!- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL
INNER MEMBRANE. CONTAINS 12 POTENTIAL TRANSMEMBRANE DOMAINS.
-!- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                                                                                                                                                                SPECIES—A.thaliana; STRAIN—CV. COLUMBIA;

-1- FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYZIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME AS AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                STRAIN=CV. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERED VIA THE COPPER A CENTER OF SUBUNIT 2 AND HEME A OF SUBUNIT 1 TO THE BIMETALLIC CENTER FORMED BY HEME A3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -i- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
-i- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL INNER MEMBRANE. CONTAINS 12 POTENTIAL TRANSMEMBRANE DOMAINS.
-i- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                                                                                                                                                      Mitochondrion.

-1. FUNCTION: CYTOCHROME C OXIDASE IS THE COMPONENT OF THE RESPIRATORY CHAIN THAT CATALYZES THE REDUCTION OF OXYGEN TO WATER. SUBUNITS 1-3 FORM THE FUNCTIONAL CORE OF THE ENZYME COMPLEX. CO I IS THE CATALYTIC SUBUNIT OF THE ENZYME. ELECTRONS ORIGINATING IN CYTOCHROME C ARE TRANSFERRED VIA THE COPPER A CENTER FORMED BY HEME AND COPPER B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4 FERRICYTOCHROME C.
--I- PATHWAY: TERMINAL STEP IN THE RESPIRATORY CHAIN.
--I- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. MITOCHONDRIAL INNER MEMBRANE. CONTAINS 12 POTEWITAL TRANSMEMBRANE DOMAINS.
--I- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bailey-Serres J., Hanson D.K., Fox T.D., Leaver C.J.; "Mitochondrial genome rearrangement leads to extension and relocation of the cytochrome c oxidase subunit I gene in sorghum."; cell 47:567-576(1986).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         220 rThrPhePheAspProAlaGlyGlyGlyAspProIleLeuTyrGlnHisL 237     submitted to the EMBL Data Library, July 1997
    A; Description: The sequence of C. elegans cosmid F22E5.
    A; Reference number: 22119
    A; Reference number: 22119
    A; Reference number: 22119
    A; Refluces: preliminary; translated from GB/EMBL/DDBJ
    A; Realdues: 1-689 <GRA>
    A; Realdues: 1-689 <GRA>
    A; Realdues: 1-689 <GRA>
    A; Realdues: 1-689 <GRA>
    A; Restimental source: strain Bristol N2; clone F22E5
    A; Gene: GESP:F22E5.15
    A; Gene: GESP:F22E5.15
    A; Agene: CESP:F22E5.15
    A; And posttion: 2
    A; Introns: 18/3; 61/3; 134/3; 239/1; 271/1; 295/2; 359/3; 515/3; 620/1; 658/1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      L-proline transport protein - rat
